WHAT RECITATION SECTION ARE YOU IN?

Closed book, closed notes, no calculators/PDAs; no reference materials of any kind. Turn off all handheld devices, including cell phones.

Show work; a correct answer, by itself, may be insufficient for credit. Arithmetic need not be simplified, unless the problem requests it.

I understand the above, and I understand that cheating has severe consequences, from a failing grade to expulsion.

II. True or false (no partial credit):

a. (5 pts) For every x < 0,  $\sqrt{x^2} = -x$ .

b. (5 pts) Let  $f(x) = x^6$ . Then f is a one-to-one function.

III. Computations. Show work. Unless otherwise specified, answers must be exactly correct, but can be left in any form easily calculated on a standard calculator.

1. (10 pts) Find all horizontal asymptotes to

$$y = \frac{\sqrt{9x^2 + 2x + 5}}{2x - 3} = 2 f(x)$$

(NOTE: A horizontal asymptote is a line; your answers should be equations of lines, **NOT** numbers.)

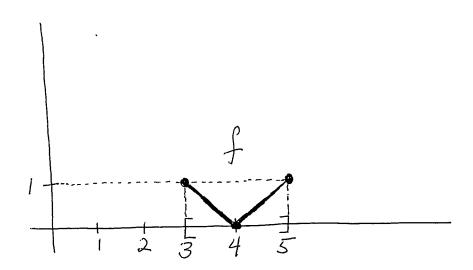

$$\lim_{x \to \pm \infty} f(x) = \lim_{x \to \pm \infty} \frac{\sqrt{9x^2}}{2x}$$

$$= \lim_{x \to \pm \infty} \frac{\pm 3x}{2x} = \pm \frac{3}{2}$$

$$y=-\frac{3}{2}$$
 and  $y=\frac{3}{2}$  are the horizontal asymptotes

- 2. (15 pts) Draw a single graph showing a function  $f:[3,5]\to\mathbb{R}$  with all of the following properties:
  - (•) Its domain is the interval [3, 5].
  - (•) It is continuous on [3, 5].

  - (•) It is differentiable on (3,4) and on (4,5). (•) For all  $x \in (3,4)$ , we have: f'(x) = -1.
  - (•) For all  $x \in (4,5)$ , we have: f'(x) = 1.
  - (•) It is not differentiable at 4.
  - $(\bullet) \ f(4) = 0.$

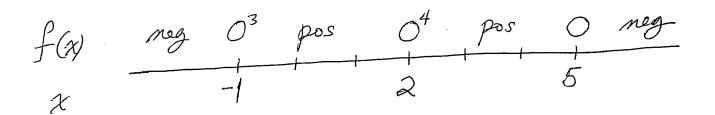

3. (10 pts) Compute 
$$\lim_{x\to\infty} \left[ \frac{x^2 + \sin^2 x}{2x^2 + 1} \right]$$
.

$$\begin{bmatrix}

\end{bmatrix}$$

$$\lim_{x \to \infty} f(x) = \frac{1}{2}$$

4. (10 pts) Let  $f(x) = -(x+1)^3(x-2)^4(x-5)$ . Find all of the maximum intervals of positivity and negativity for f.
