WHAT RECITATION SECTION ARE YOU IN?

Closed book, closed notes, no calculators/PDAs; no reference materials of any kind. Turn off all handheld devices, including cell phones.

Show work; a correct answer, by itself, may be insufficient for credit. Arithmetic need not be simplified, unless the problem requests it.

I. Multiple choice

$$-(x^2+4x+3) = -(x+3)(x+1)$$

A. (5 pts) (no partial credit) Suppose $f''(x) = -x^2 - 4x - 3$. At most one of the following statements is true. If one is, circle it. Otherwise, circle "NONE OF THE ABOVE".

(a) f is concave up on $(-\infty, 1]$, down on $[1, 3]$ and up on $[3, \infty)$.

(b) f is concave down on $(-\infty, 1]$, up on $[1, 3]$ and down on $[3, \infty)$.

(c) f is concave up on $(-\infty, -3]$, down on $[-3, -1]$ and up on $[-1, \infty)$.

(d) f is concave down on $(-\infty, -3]$, up on $[-3, -1]$ and down on $[-1, \infty)$.

(e) NONE OF THE ABOVE

f'': neg 0 pos 0 neg; -3, -1

B. (5 pts) (no partial credit) Let f be a function such that $f'(x) = 4(\cos(4x))$. Suppose, also, that $f(0) = 1$. Which of the following is an equation of the tangent line to the graph of f at $(0, 1)$. Circle one of the following answers:

(a) $y - 1 = 4x$

(b) $y = -4(\sin(x))(x - 1)$

(c) $y = 4(x - 1)$

(d) $y - 1 = 4(\cos(4x))x$

(e) NONE OF THE ABOVE

slope $= f'(0) = 4$

$y - 1 = 4(x - 0)$

$y - 1 = 4x$

C. (5 pts) (no partial credit) Let $y = x^2 + x$. Compute $\triangle y$, evaluated at $x = 10$, $\triangle x = 0.1$. (Hint: $\triangle(x^2) = 2x(\triangle x) + (\triangle x)^2$.)

(a) 3.21

(b) 1.12

(c) 3.2

(d) 1.2

(e) NONE OF THE ABOVE

$$= [\Delta(x^2)] + [\Delta(x)]$$

$$= [2x(\Delta x) + (\Delta x)^2] + [\Delta x]$$

$$[2(10)(0.1) + (0.1)^2] + [0.1]$$

$$= 2 + 0.01 + 0.1 = 2.11$$

D. (5 pts) (no partial credit) Find the logarithmic derivative of x^2+3x-8 w.r.t. x. Circle one of the following answers:

(a) $-\left[\dfrac{2x+3}{x^2+3x-8}\right]$

(b) $\dfrac{x^2+3x-8}{2x+3}$

(c) $\dfrac{2x+3}{x^2+3x-8}$

(d) $\ln(2x+3)$

(e) NONE OF THE ABOVE

E. (5 pts) (no partial credit) Suppose

- $f'(1)=1,\ f''(1)=3,$
- $f'(2)=0,\ f''(2)=2,$
- $f'(3)=0,\ f''(3)=-6.$

At which of the numbers 1, 2 and 3 does f have a local minimum? Circle one of the following answers:

(a) 1, but not 2, and not 3

(b) 2, but not 1, and not 3

(c) 3, but not 1, and not 2

(d) both 2 and 3, but not 1

(e) NONE OF THE ABOVE

F. (5 pts) (no partial credit) Let $f(x)=x^3+4x+3$. What is the iterative formula of Newton's method used to solve $f(x)=0$? Circle one of the following answers:

(a) $x_{n+1}=x_n-\dfrac{3x_n^2+4}{x_n^3+4x_n+3}$

(b) $x_{n+1}=x_n-\dfrac{x_n^3+4x_n+3}{3x_n^2+4}$

(c) $x_{n+1}=x_n+\dfrac{3x_n^2+4}{x_n^3+4x_n+3}$

(d) $x_{n+1}=x_n+\dfrac{x_n^3+4x_n+3}{3x_n^2+4}$

(e) NONE OF THE ABOVE

II. True or false (no partial credit):

a. (5 pts) Let $f, g : \mathbb{R} \to \mathbb{R}$ be any two differentiable functions such that, for all $x \in \mathbb{R}$, $f'(x) = g'(x)$. Then $f - g$ is a constant.

MVT

True

b. (5 pts) Let f and g be any two functions such that $\lim_{x\to 7} f(x) = \infty$ and $\lim_{x\to 7} g(x) = \infty$. Then $\lim_{x\to 7} [1/(f(x))]^{g(x)} = 0$.

"$[1/\infty]^{\infty} = [0^+]^{\infty} = 0$"

True

c. (5 pts) Let f be any function such that $f(3) = 5$ and such that $f''(3) = 0$. Then $(3, 5)$ is a point of inflection for f.

$f(x) = (x-3)^4 + 5$

False

d. (5 pts) If f has a global minimum at c, then c is a critical number for f.

Fermat's Theorem

True

e. (5 pts) Let f be any function such that $f(x)$ is increasing on $1 < x < 3$. Then $f'(2) > 0$.

$f(x) = (x-2)^3$

False

VERSION C

I. A,B,C

I. D,E,F

II. a,b,c,d,e

III. 1.

III. 2.

III. 3.

III. 4.

III. Computations. Show work. Unless otherwise specified, answers must be exactly correct, but can be left in any form easily calculated on a standard calculator.

1. (10 pts) Compute $d\left[\dfrac{\tan(x^3)}{8+e^{x^2}}\right]$. (Here e^{x^2} means $e^{(x^2)}$.)

WARNING: You are asked to find the differential, d, and *NOT* the derivative, d/dx.

$$\frac{[8+e^{x^2}][(\sec^2(x^3))(3x^2)]-[\tan(x^3)][(e^{x^2})(2x)]}{[8+e^{x^2}]^2}\,dx$$

2. (10 pts) Suppose $f'(x) = e^{-x^2}$. (Here e^{-x^2} means $e^{(-x^2)}$.) Define $g(x) = f(-2x+7)$. Compute $g'(2)$.

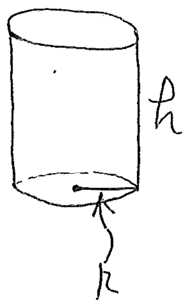
$$g'(x) \overset{CR}{=} (f'(-2x+7))(-2)$$

$$g'(2) = (f'(3))(-2)$$

$$= (e^{-3^2})(-2)$$

$$= -2e^{-9}$$

3. (15 pts) We must design a cylindrical can that contains 128π cubic feet of volume inside, and which minimizes surface area. Find the height, h, and the radius, r, of such a can. (Remember: The surface area includes the side of the can, the bottom of the can, and the top of the can).



$$\cancel{\pi} r^2 h = 128\cancel{\pi}$$
$$h = 128 r^{-2}$$

minimize $S := 2\pi r^2 + 2\pi r h = 2\pi\left(r^2 + r\left(128 r^{-2}\right)\right) = 2\pi\left(r^2 + 128 r^{-1}\right)$

$$\frac{dS}{dr} = 2\pi\left(2r - 128 r^{-2}\right) = 4\pi\left(r - \frac{64}{r^2}\right) = 4\pi\left(\frac{r^3 - 64}{r^2}\right)$$

dS/dr	neg	0	pos
r	0	4	

On $r > 0$, S attains its global minimum only

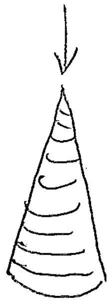
at $r = 4$ ft

$$h = (128)(4^{-2}) = 8 \text{ ft}$$

4. (10 pts) Sand is accumulating in a conical pile whose base radius is, at all times, one third its height. Sand is being added at 200 cubic feet per hour. At what rate is the height of the pile increasing, at the moment when the height is 10 feet?

$t = \text{time}$ $\quad \bullet = \dfrac{d}{dt}$ $\quad t_0$ $\quad * = [t :\longrightarrow t_0]$

200



$r := \text{base radius}$

$h := \text{height}$

$V := \text{volume}$

$r = \dfrac{1}{3} h$

$\dot{V} = 200$

$h_* = 10$

$\dot{h}_* = ?$

$$V = \frac{1}{3}\pi r^2 h = \frac{1}{3}\pi\left(\frac{1}{3}h\right)^2 h = \frac{1}{27}\pi h^3$$

$$200 = \dot{V} = \frac{1}{27}\pi\left(3h^2\dot{h}\right) = \frac{1}{9}\pi h^2 \dot{h}$$

$$200 = \frac{1}{9}\pi h_*^2 \dot{h}_*$$

$$= \frac{1}{9}\pi(10^2)(?)$$

$$? = \frac{9 \cdot 200}{\pi(10^2)} = \frac{1800}{100\pi} = \frac{18}{\pi} \text{ ft/hr}$$
