

CALCULUS
Optimization
OLD2

0510-1. Among all pairs of real numbers whose sum is equal to 7, we seek the pair whose product is maximized. We examine the following table.

x	$7 - x$	$x(7 - x)$
1	6	6
2	5	10
3	4	12
4	3	12
5	2	10
6	1	6

- a. Based on this table, **guess** a solution.
- b. **Find** the exact solution by finding the maximum of all the values of

$f(x) = x(7 - x)$ at critical numbers.

0510-2. Among all pairs of real numbers
whose difference is equal to 9, find
the pair whose product is minimized.

0510-3. Maximize uv
subject to $2u + 5v = 100$.

0510-4. Maximize $r + s$
subject to $r^8 + s^8 = 5$.

0510-5. The top of the object in the diagram
is a semicircle. The total
perimeter of the object is
20 meters. Find the
dimensions x and y that
maximize the area enclosed.

0510-6. We plan to build a fenced area with six pens for livestock, as shown. We wish for the total length of the fencing (including both the perimeter and the interior fencing) to be 120 yards. Find the maximum possible enclosed area.

OLD2

0510-7. We plan to build a fenced area with six pens for livestock, as shown. We wish for the total area enclosed (including all six pens) to be 400 feet². Each foot of fencing costs one dollar. Find the minimum possible cost of the fencing.

OLD2

0510-8. We have 850 meters² of material from which to build an open-topped cylindrical container. Find the radius and height that maximizes the volume enclosed.

0510-9. Let L be the line $3x + 2y = 1$.

- a. Find the point P on L closest to $(4, 1)$, by minimizing $(x - 4)^2 + (y - 1)^2$, subject to $3x + 2y = 1$.
- b. Find an equation of the line N that is perpendicular to L and passes through the point $(4, 1)$.
- c. Find the point Q that is on the intersection of L and N .
- d. Sketch the graph of L , and then add in $(4, 1)$, P , Q and N .

0510-10. Let E be the ellipse

OLD2

$$64x^2 + 225y^2 = 289.$$

Find the dimensions of a rectangle inscribed in E (with sides parallel to the axes of E) whose area is maximal.

0510-11. Let S be a sphere of radius 10.

OLD2

Find the radius and height of a right circular cone inscribed in S whose volume is maximal.

0510-12. We build two holding pens with 90 feet of fencing. One is in the shape of a square. The shape of the other is an equilateral triangle. Find the maximum total area that can be enclosed in the two pens.

OLD2

OPTIONAL PROBLEM,
NOT ASSIGNED

0510-13. On an $(11 \text{ cm}) \times (13 \text{ cm})$ sheet of paper, we mark a green-dashed square in each corner, each one of side length s . After cutting out these squares, we fold along the red-dashed lines as shown, creating an open-topped box. What is the maximum volume of such a box?

OPTIONAL PROBLEM,
NOT ASSIGNED

0510-14. I must travel from point P on land
N/A
to point R in the water. My land speed is
5 mph. My water speed is 2 mph. I choose
the point Q_0 so as to minimize travel time.
Define θ_0 and ϕ_0 as shown in the picture

and show that $\frac{\sin \theta_0}{\sin \phi_0} = \frac{5}{2}$.

Note: This is called
Snell's Law.

Note: You may assume that \exists a unique Q_0
that minimizes the travel time from P to R .
