The Fundamental Theorems of Calculus,
problems
NEW

0620-1. The graph of g is shown below.

NEW

Let $f(x) = \int_0^x g(t) dt$.

- Compute $f(6)$.
- Find the maximal intervals of increase and decrease for f .
- At what numbers does f have a local max and local min?
- Find the maximal intervals of concavity for f .
- What are the points of inflection for f ?

NEW 0620-2. Let $f(x) = \int_{1+\sqrt{2}}^x (t^3 + 2t) dt$.

- Compute a (polynomial) formula for $f(x)$.
- Compute a (polynomial) formula for $f'(x)$.

NEW 0620-3. Let $f(x) = \int_0^x e^{2s^2} ds$.

- Sketch $y = e^{2s^2}$, then choose some number on the s -axis, label it as x , and shade in a region under the graph whose area is $f(x)$.
- Compute a formula for $f'(x)$.

NEW 0620-4. Compute $\frac{d}{dx} \int_{-\pi}^x e^{q^6} dq.$

NEW 0620-5. Compute $\frac{d}{dx} \int_x^{-\pi} e^{q^6} dq.$

NEW 0620-6. Compute $\frac{d}{dx} \int_{-\pi}^{x^3} e^{q^6} dq.$

NEW 0620-7. Compute $\frac{d}{dx} \int_{-\pi}^{x^4} e^{q^6} dq.$

NEW 0620-8. Compute $\frac{d}{dx} \int_{x^3}^{-\pi} e^{q^6} dq.$

NEW 0620-9. Compute $\frac{d}{dx} \int_{x^3}^{x^4} e^{q^6} dq.$

0620-10. Compute $\frac{d}{ds} \int_{-2 \sin s}^{e^5 + e^4} e^{u^4 + 3u^3} du.$

0620-11. Compute $\frac{d}{dt} \int_{-\sqrt{2}}^{5-t^2} \arctan(u^2) du.$

0620-12. Compute $\frac{d}{dv} \int_{-v^2}^e \ln(2 + \cos w) dw.$

0620-13. Evaluate $\int_2^3 \left(x^2 + \frac{1}{\sqrt{x^3}} \right) dx.$

0620-14. Evaluate $\int_3^7 \frac{\pi x^4 - 2x^2 + 3x + 8}{\sqrt[5]{x}} dx.$

0620-15. Evaluate $\int_{\pi/4}^{\pi/3} (e \sin t - \pi \cos t) dt.$

0620-16. Evaluate $\int_{\pi/4}^{\pi/3} (\csc t)(\cot t) dt.$

0620-17. Evaluate $\int_0^1 \frac{1}{1 + (eu + \pi)^2} du.$

0620-18. Evaluate $\int_{-\pi}^e (x + |x|) dx.$

0620-19. Evaluate $\lim_{n \rightarrow \infty} \frac{5}{n} \left[\sum_{j=1}^n \left(\frac{5j}{n} \right)^2 \right],$

by converting to a definite integral, and then using the Fundamental Theorem of Calculus.

0620-20. Evaluate $\lim_{n \rightarrow \infty} \frac{5}{n} \left[\sum_{j=0}^{n-1} \left(\frac{5j}{n} + \frac{5}{2n} \right)^7 \right],$

by converting to a definite integral, and then using the Fundamental Theorem of Calculus.

0620-21. Evaluate $\lim_{n \rightarrow \infty} \frac{\pi}{6n} \left[\sum_{j=0}^{n-1} \csc^2 \left(\frac{\pi}{6} + \frac{\pi j}{6n} \right) \right],$

by converting to a definite integral, and then using the Fundamental Theorem of Calculus.

0620-22. Water starts pouring from a tank.

NEW

After t minutes, the rate of flow, out of the tank is $6 + t^5$ gallons per minute.

How many gallons pour out between 3 and 8 minutes after the start?

0620-23. A model rocket is launched and starts climbing.

NEW

After t seconds, its altitude is increasing at $6 + t^5$ feet/second. How much does its altitude increase between 3 and 8 seconds after launch?

0620-24. At x ounces, the marginal cost of production for certain liquid is $6 + x^5$ dollars per ounce. How much does it cost to increase production from 3 to 8 ounces?

0620-25. A rope lies along a number line, between 0 and 100. The weight density of the rope at x is $6 + x^5$ pounds per inch. **How much** does the portion of the rope $x = 3$ and $x = 8$ weigh?

0620-26. By definition, **if** a force of F is applied to a particle over a distance s , **then** the **work** done is Fs . A 40 foot rope hangs from the top of a wall, and its density is 5 ounces per foot. We pull the rope up over the wall. Each particle of rope is acted on by a force equal to its weight, until it reaches the top of the wall (after which it simply coils up on the roof, which involves **no** work). **How much** work is done in pulling the rope up?

0620-27. By definition, **if** a force of F is applied to a particle over a distance s , **then** the **work** done is Fs . A certain object is lying on a frictionless horizontal number line, attached to a horizontal spring, which, in turn, is attached to a vertical wall. The wall crosses the number line at -2 , and the object is positioned on the number line at 0 . We pull the object from 0 to 8 . **Assume** that the spring pulls back with a force of $5x$, when the object is positioned at x . **Compute** the total work done by the spring.
