

SQL Queries

Chapter 5

Database Management Systems 3ed, R. Ramakrishnan and J. Gehrke

Conceptual Evaluation

- 1. Compute the cross-product of *relation-list*.
- 2. Discard resulting tuples if they fail *qualifications*.
- 3. Delete attributes that are not in *target-list*.
- 4. The remaining tuples are partitioned into groups by the value of attributes in *grouping-list*.
- 5. The *group-qualification* is applied to eliminate some groups.
- 6. One answer tuple is generated per qualifying group.
- 7. If **DISTINCT** is specified, eliminate duplicate rows.

Find age and rating of the youngest sailor with age ≥ 18 , for each rating with at least 2 <u>such</u> sailors

SELECT S.rating, MIN (S.age) AS minage FROM Sailors S WHERE S.age >= 18 GROUP BY S.rating HAVING COUNT (*) > 1

Answer relation:

rating	minage
3	25.5
7	35.0
8	25.5

•What if we do not have the condition age >18

Database Management Systems 3ed, R. Ramakrishnan and J. Gehrke

Sailors instance:

minage

25.5

35.0

25.5

Find age of the youngest sailor with age ≥ 18 , for each rating with at least 2 <u>such</u> sailors.

rating	age		rating	age		
7	45.0		1	33.0		
1	33.0		3	25.5		
8	55.5		3	63.5		rating
8	25.5	Ň	3	25.5		3
10	35.0		7	45.0		7
7	35.0	γ	7	35.0		8
10	16.0		8	55.5		
9	35.0		8	25.5		
3	25.5		9	35.0		
3	63.5		10	35.0

Find age of the youngest sailor with age ≥ 18 , for each rating with at least 2 <u>such</u> sailors and with every sailor under 60.

HAVING COUNT (*) > 1 AND EVERY (S.age <=60)

000

For each red boat, find the number of reservations for this boat

SELECT	B.bid, COUNT (*) AS scount
FROM	Boats B, Reserves R
WHERE	R.bid=B.bid AND B.color='red'
GROUP BY	B.bid

- Grouping over a join of two relations.
- What do we get if we remove B.color='red' from the WHERE clause and add a HAVING clause with this condition?

Find age of the youngest sailor with age ≥ 18 , for each rating with at least 2 sailors between 18 and 60.

SELECT S.rating, MIN (S.age) AS minage FROM Sailors S WHERE S.age >= 18 AND S.age <= 60 GROUP BY S.rating HAVING COUNT (*) > 1

Answer relation:

rating	minage
3	25.5
7	35.0
8	25.5

Sailors instance:

sid	sname	rating	age
22	dustin	7	45.0
29	brutus	1	33.0
31	lubber	8	55.5
32	andy	8	25.5
58	rusty	10	35.0
64	horatio	7	35.0
71	zorba	10	16.0
74	horatio	9	35.0
85	art	3	25.5
95	bob	3	63.5
96	frodo	3	25.5

Find age of the youngest sailor with age > 18, for each rating with at least 2 sailors (of any age)

SELECT S.rating, MIN (S.age) FROM Sailors S WHERE S.age > 18 GROUP BY S.rating HAVING 1 < (SELECT COUNT (*) FROM Sailors S2 WHERE S.rating=S2.rating)

* Shows HAVING clause can also contain a subquery.

- Compare this with the query where we considered only ratings with 2 sailors over 18!
- What if HAVING clause is replaced by:
 - HAVING COUNT(*) >1

Database Management Systems 3ed, R. Ramakrishnan and J. Gehrke

Find those ratings for which the average age is the minimum over all ratings

Aggregate operations cannot be nested! WRONG:

SELECT S.rating FROM Sailors S WHERE S.age = (SELECT MIN (AVG (S2.age)) FROM Sailors S2)

Correct solution (in SQL/92):

SELECT Temp.rating, Temp.avgage FROM (SELECT S.rating, AVG (S.age) AS avgage FROM Sailors S GROUP BY S.rating) AS Temp WHERE Temp.avgage = (SELECT MIN (Temp.avgage) FROM Temp)

Database Management Systems 3ed, R. Ramakrishnan and J. Gehrke
