Index for Abstract Algebra

Paul Garrett garrett@math.umn.edu <http://www.math.umn.edu/~garrett/>

[this document is <http://www.math.umn.edu/~garrett/m/algebra/Index.pdf>]

The pagination refers to the file http://www.math.umn.edu/~garrett/m/algebra/Whole_with_TOC.pdf

abelian group 17
additive identity 47
adjacent transposition 176
adjoining field elements 85
adjoint operator 313
adjugate matrix 343
algebra 52
algebra homomorphism 52, 54, 54
algebraic closure 96, 274
algebraic derivative 105
algebraic element over field 87
algebraic field extension 92
algebraically closed field 96, 274
alternating map 377
alternating property 345
analytic continuation 269
annihilator 156
Artin-Schreier polynomials 124
associativity 8, 17
automorphism group of field extension 224
automorphism of group 36
automorphisms of cyclotomic fields 243
averaging 224
Axiom of Choice 183

basis for vectorspace 80
bijective 183
bilinear 353
bilinear form 331
bilinear pairing 331
binary relation 183
binomial theorem 8
block decomposition 337, 349
Burali-Forti paradox 187

cancellation property 48, 63
cancellation trick 263
canonical map 377
Cantor-Schroeder-Bernstein theorem 187
Cartan decomposition 322
Cartan's lemma 388
Cartesian product 182
category theory 330

Cayley-Hamilton theorem 344, 390
centralizer 213
characteristic of field 91
characteristic polynomial 344
characters 266
Chinese remainder theorem 11
choice function 183
circulant matrix 208
class formula 30
closure under group operation 19
coefficients of cyclotomic polynomials 112
cofactor matrix 343
column rank 329
common divisor 2, 61
common multiple 2, 61
commutative group 17
commutative ring 48
commutator 35
commuting endomorphisms 309
complex conjugation 4
complexification 353
composition series 296
compositum of fields 94
computing tensor products 357
congruence class 7
conjugacy classes 30, 176
conjugacy classes of matrices 134
conjugate field elements 122
conjugate group elements 30
conjugates 282
content 167
Continuum Hypothesis 191
contraction 371
coprime 2
counting formula 30
counting irreducibles 123
covectors 352
Cramer's rule 342, 348
cycle 175
cyclic field extension 282
cyclic group 24
cyclic module 131
cyclic vector 131
cyclotomic polynomial 107, 200, 211

Dedekind finiteness 187
degree of polynomial 61
derivation 106, 209
determinant 344
determinants revisited 385
diagonalizable linear operator 307
differentials 353
dimension of vectorspace 81

direct sum of groups 34
direct sum of modules 124
Dirichlet character 263
Dirichlet series 261
Dirichlet series with positive coefficients 270
Dirichlet's theorem 113, 263
discriminant 196, 289
disjoint cycles 175
disjoint orbits 176
distributivity 8, 47
divides 1, 61
division ring 48
dot product 310
double duals 330
dual basis 327
dual group 261, 266
dual space 326
dual version of cancellation trick 267

eigenspace 304
eigenvalue 130, 304
eigenvector 130, 304
Eisenstein's criterion 199
elementary divisors 126, 130
elementary symmetric polynomials 193
elements of set 181
empty set 181
equivalence class 6, 183
equivalence relation 6, 183
equivalents of the Axiom of Choice 191
Euclidean 2, 61, 63
Euler phi-function 10, 109
Euler product expansion 262
Euler totient function 10, 109
Euler criterion 231
Euler identity 210
Euler theorem 10, 21
Euler-Riemann zeta function 262
existence of inverses 17
expansion by minors 343, 349
exponent of group element 21
exponential map 58
extension of scalars 353, 361
extension principle 181
exterior power 377
exterior powers of free modules 382

factorization 165
failure of unique factorization 4
Fermat's little theorem 8
Fermat-Euler 71
field 48, 69

field extension 85, 274
field of fractions 88, 166
finite division rings are fields 213
finite field extension 93
finite fields 119
finite-dimensional vectorspace 81
finitely-generated abelian groups 128
finitely-generated module 124 , 156
finitely-generated modules over PID 126
fixed points 175
flag of subspaces 84
fraction in lowest terms 5
free algebra 54
free module 151
Frobenius automorphism 120
function 182
functor 330
functoriality 362

G-set 28
Galois conjugates 122, 282
Galois group 273
Galois norm 282
Galois theory 280
Galois trace 282
Gauss sum 232
Gauss' lemma 165
Gaussian integers 5
gcd 64, 167
general linear group 49, 124
generalized eigenvector 304
generator 54, 151
generators of ideal 67
Gram-Schmidt process 310
graph of function 182
greatest common divisor 2, 63, 167
group action on set 28
group automorphism 36
group homomorphism 22
group of characters 261, 266
group of units 8, 48
groups 17
groups of order pq 34
groups of order pqr 36
groups of prime order 34

Hamiltonian quaternions 59, 374
Hausdorff Maximality Principle 191
Hensel's lemma 15, 172, 173
hermitian operator 314
hermitian product 310
homogeneous system of equations 334

homomorphic image 23
homomorphism 22, 50

ideal 54, 65
idempotent element 50
idempotent elements in \mathbb{Z}/n 74
image 81
image of group homomorphism 22
inclusion-reversing bijection 280
independent indeterminates 290
indeterminates 54, 290
index of subgroup 20
infinitude of primes $p \equiv 1 \pmod n$ 113
initial ordinal 187
initial segment 184
injective 183
inner automorphism 178
inner product 310
inseparable field extension 253
integers mod m 6
integral domain 48, 61, 69
intersection of sets 182
invariant factors 126
invariant subgroup 24
irreducible polynomial 63
irreducible polynomials over finite fields 100
isomorphism of groups 23
isomorphism theorem 27
isotropy subgroup 29

Jacobi identity 340
Jordan block 132
Jordan canonical form 130, 133
Jordan-Holder theorem 296

k -cycle 175
kernel 81
kernel of group homomorphism 22
kernel of linear map 52, 54
kernel of ring homomorphism 50
Kronecker product 338
Kronecker-Weber theorem 230
Kummer extensions 282

Lagrange interpolation 102
Lagrange replacement principle 80
Lagrange resolvent 227
Lagrange's theorem 20
Landau's lemma 269, 270
least common multiple 2
left ideal 54

Leibniz' extension principle 181
Leibniz' identity 209
Leibniz' rule 105
Lie algebra 340
Lie homomorphism 340
limit ordinal 187
linear combination 52
linear derivation 106
linear functionals 160, 326
linear map 52, 81
linear operator 81
linear subspace 79
linear system 342
linearly dependent 52
linearly independent 52
linearly independent module elements 151
linearly independent vectors 80
Lucas-Auifeullian-LeLasseur factorization 112

main theorem of Galois theory 280
map 182
mapping properties 151
maximal ideal 69
meromorphic continuation 269
minimal polynomial 306
minimal polynomial of field element 86
minimal polynomial of linear map 87
minors 386
mixed tensors 352
Möbius function 124
module 7, 52
monic polynomial 63
monomial tensors 356
multilinear map 377
multilinearity 344
multiple 1, 61
multiplicative group 8
multiplicative group of a field 219
multiplicative identity 48
multiplicative inverse 48
multiplicative inverse mod m 8
multiset 176
mutually prime 2

naive set theory 181
natural equivalence 331
natural isomorphism 330
natural numbers 185
natural transformation 330
nilpotent element 50
nilpotent elements in Z/n 74
nilradical 76, 77

Noetherian ring 158
non-degenerate pairing 291
non-maximal prime ideal 70
non-vanishing on $\operatorname{Re}(s)=1$ 268
norm 4, 282
norm in Gaussian integers 5
normal field extension 278
normal subgroup 24
nth root of indeterminate 255

orbit 30
orbit-counting formula 213
orbits 176
order of group 19
order of group element 21
ordered n-tuple 182
ordered pair 15, 182
ordinal 184
orthogonal 310
orthogonal complement 312
orthogonal idempotents 74
orthogonal projector 312
orthonormal basis 310
outer automorphism 178
over-field 85

p-Sylow subgroup 31
partial fractions 102
partial ordering 183
partially ordered set 183
partition 7
Peano finiteness 187
perfect field 106
permutation group 175
permutations 18, 175
perpendicular 310
point-wise fixer 29
polarization identity 315
polynomial ring 52
poset 183
positive self-adjoint operator 318
positive-definite 310
positivity property 310
prime 2
prime element 61
prime field 91
prime ideal 69
primitive element 277
primitive nth root of unity 220
primitive root 113
principal ideal 66
principal ideal domain 66 , 124

projective linear group 177
projective module 153
proper divisor 61
proper ideal 66
proper subgroup 19
proper subset 182
property of 0 8
property of 1 8
property of identity 17

quadratic Gauss sum 232
quadratic reciprocity 230
quadratic symbol 230
quaternions 59, 374
quotient group 26
quotient homomorphism 69
quotient map 26
quotient ring 68

R-bilinear 353
R-module 52
R-rank of module 153
radical 77
rank of module 153
rational canonical form 131
rational functions 88
reduction 1
reduction mod m homomorphism 51
reflexivity 6
remainder 2
repeated roots 254
replacement principle 80
residue class 7
Riemann zeta function 262
right ideal 52, 54
ring 47
ring homomorphism 50
ring isomorphism 50
ring of endomorphisms 52, 54
ring with unit 48
roots of unity 220
row rank 329
Ruffini-Abel theorem 294

scalar multiplication 52
scalar product 310
section of surjection 153
self-adjoint 314
semi-direct product 37
semi-simple linear operator 307
separable field extension 275

set 181
set theory 181
simple group 24
simultaneous diagonalization 310
solution in radicals 227
solving cubics by radicals 296
spanning 80
spectral theorem 317
splitting field 119, 278
spurious roots 92
square root mod p 9
stabilizer 29
standard basis 81 , 129
standard inner product 319
structure theorem for finitely-generated abelian groups 128
structure theorem for finitely-generated modules over PID 126
subgroup 19
subgroup generated by subset 19
submodule 52
submodules of free modules over PID 155
subspace spanned by set 79
substitute 54
successor ordinal 187
sums of two squares 71
Sun-Ze's theorem 11
supplementary law of quadratic reciprocity 231
surjective 183
Sylow theorem 31
symmetric group 175, 193
symmetric polynomials 193
symmetrizing 224
symmetry 6

Taylor-Maclaurin expansion 58
tensor product 338, 354
test for linear factors 65
torsion element 156
torsion-free 156
total degree 210
tower of fields 95
trace 282, 371
trace pairing 291
transcendental field extension 255
transfinite induction 187
transfinite Lagrange replacement 190
transitive action 29
transitivity 6
transposition 176
trivial character 263
trivial ideal 66
trivial subgroup 19

UFD 61, 166
union of sets 182
unique factorization domain 3, 61, 166, 199
unique up to unique isomorphism 151, 354
uniqueness in structure theorem 387
uniqueness of additive identity 49
uniqueness of identity 18
uniqueness of inverses 18
unit 48
unitary operator 314
unity 48
universal mapping property 55
universal object 55

Vandermonde determinant 203, 216
Vandermonde matrix 203
variable 54
vector space homomorphism 81
vector space isomorphism 81
vector subspace 52, 79
vectorspace 52
vectorspace endomorphism 87
von Neumann ordinals 184

weak multiplicativity 109
Wedderburn's theorem 213
well ordering 183
Well-ordering principle 191

Z-algebra 91
Zermelo's postulate 191
zero divisor 48
Zorn's Lemma 191
