Overview
In this assignment you are required to develop test cases from a short requirements specification. You are required to document the test cases and, when the code becomes available, you will use these high-level test cases to develop concrete tests that can be executed by the program.

You will in a later assignment develop test cases at the unit level from the design document. Finally, you will be given the code so you can actually execute all your test cases and fill out error reports.

Your assignment
You are given a simple requirements document and you are required to develop test cases to test these requirements well. The requirements document is available from the web page. A template for how you can organize your test cases is also available from the web page.

You are required to turn in the following:

1. A test case matrix.
3. Test cases that cover the requirements.

Description and templates for these documents are available in the template document on the web page.

Due Date
In class on Thursday 20
