KEYPOINT DETECTION: SCALE SPACE EXTREMA

$$L = \sigma^2 \nabla^2 G$$

Laplacian of Gaussian (LoG)

WHAT CHARACTERIZES KEYPOINT?

$$D(x, y, \sigma + \Delta\sigma)$$

$$D(x, y, \sigma)$$

$$D(x, y, \sigma - \Delta\sigma)$$

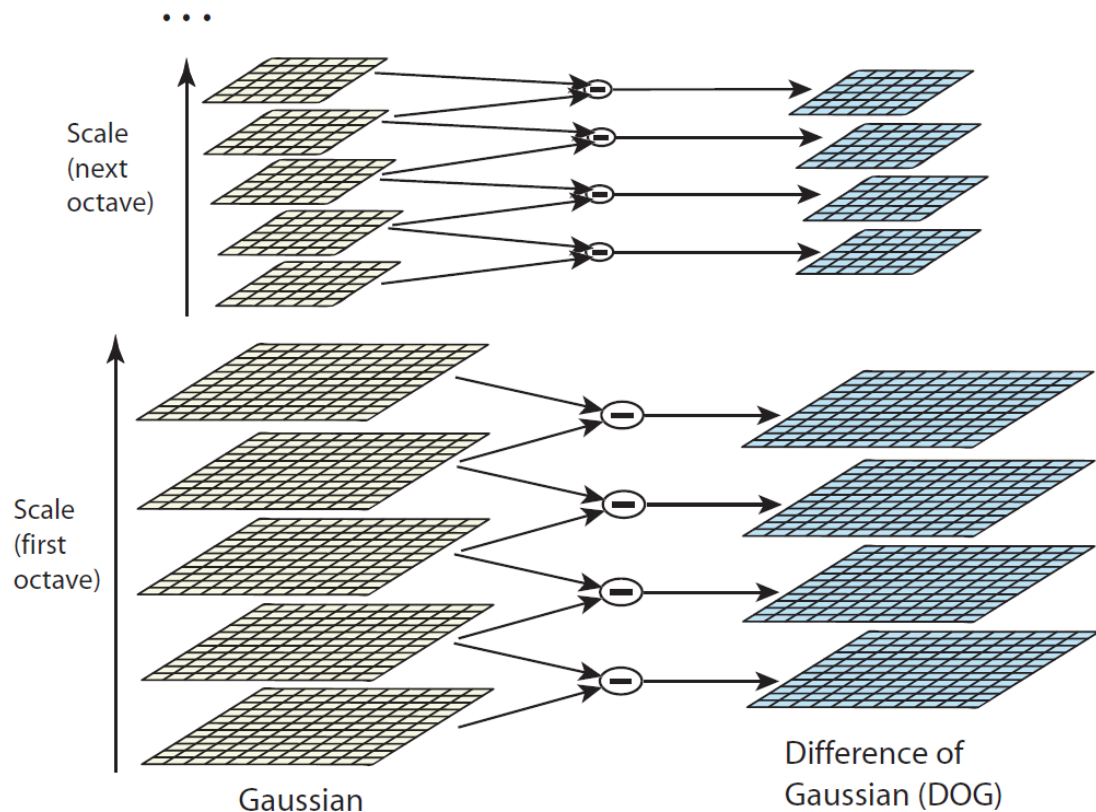

(x, y) is keypoint if

$$D(x, y, \sigma) > D(x \pm \Delta x, y \pm \Delta y, \sigma \pm \Delta\sigma)$$

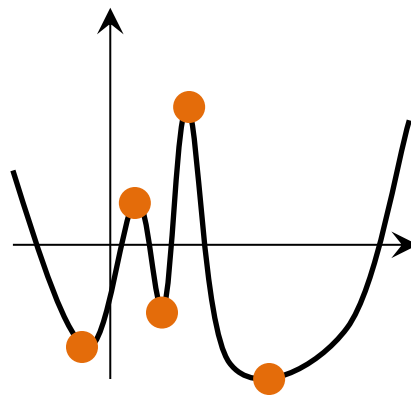

or

$$D(x, y, \sigma) < D(x \pm \Delta x, y \pm \Delta y, \sigma \pm \Delta\sigma)$$

LAPLACIAN ~ DIFFERENCE OF GAUSSIAN

WHAT CHARACTERIZES KEYPOINT?

Local extrema (minima/maxma)

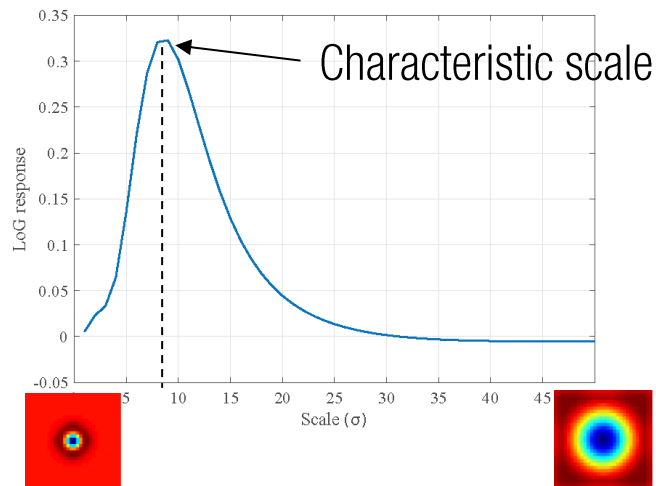

WHAT CHARACTERIZES KEYPOINT?

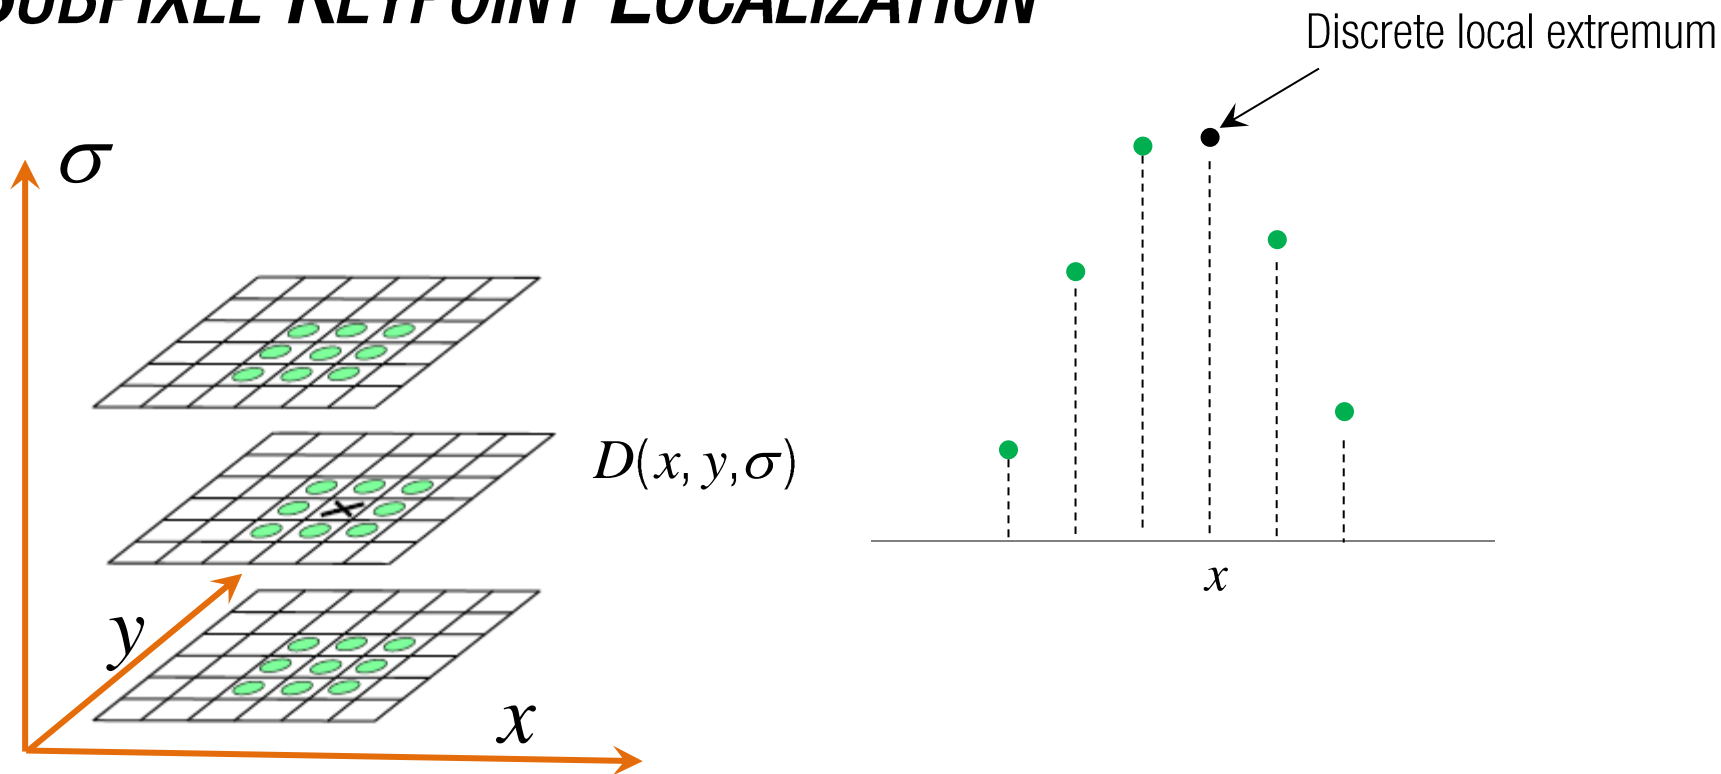

$$D(x, y, \sigma) = I(x, y) * L(\sigma)$$

Scale space response

Local extrema (minima/maxima)

SUBPIXEL KEYPOINT LOCALIZATION

SUBPIXEL KEYPOINT LOCALIZATION

SUBPIXEL KEYPOINT LOCALIZATION

Newton's method

$$f(x + \Delta x) = f(x) + f' \Delta x + \frac{1}{2} f'' \Delta x^2$$

$$\Delta x = -\frac{f'}{f''}$$

SUBPIXEL KEYPOINT LOCALIZATION

Newton's method

$$f(x + \Delta x) = f(x) + f' \Delta x + \frac{1}{2} f'' \Delta x^2$$

$$\Delta x = -\frac{f'}{f''}$$

$$D(\mathbf{x} + \Delta \mathbf{x}) = D(\mathbf{x}) + \underbrace{\frac{\partial D}{\partial \mathbf{x}}}_{\text{Gradient}} \Delta \mathbf{x} + \frac{1}{2} \Delta \mathbf{x}^\top \underbrace{\frac{\partial^2 D}{\partial \mathbf{x}^2}}_{\text{Hessian}} \Delta \mathbf{x}$$

$$\Delta \mathbf{x} = -\left(\frac{\partial^2 D}{\partial \mathbf{x}^2} \right)^{-1} \frac{\partial D}{\partial \mathbf{x}}$$

THRESHOLDING: LOW CONTRAST

$$|D(\mathbf{x})| < 0.03$$

THRESHOLDING: EDGE

THRESHOLDING: EDGE

$$\lambda_1 \approx \lambda_2$$

$$\lambda_1 \gg \lambda_2$$

Principal curvatures are eigen values of Hessian matrix:

$$H = \begin{bmatrix} D_{xx} & D_{xy} \\ D_{yx} & D_{yy} \end{bmatrix}$$

THRESHOLDING: EDGE

$$\lambda_1 \approx \lambda_2$$

$$\lambda_1 \gg \lambda_2$$

Principal curvatures are eigenvalues of Hessian matrix:

$$H = \begin{bmatrix} D_{xx} & D_{xy} \\ D_{yx} & D_{yy} \end{bmatrix}$$

Figure 5: This figure shows the stages of keypoint selection. (a) The 233x189 pixel original image. (b) The initial 832 keypoints locations at maxima and minima of the difference-of-Gaussian function. Keypoints are displayed as vectors indicating scale, orientation, and location. (c) After applying a threshold on minimum contrast, 729 keypoints remain. (d) The final 536 keypoints that remain following an additional threshold on ratio of principal curvatures.

SCALE-INVARIANT FEATURE TRANSFORM (SIFT)

2. Keypoint detection via scale space extrema

3. Orientation assignment

ORIENTATION ASSIGNMENT

Peak orientation ~ dominant orientation

Histogram of orientation
weighted by gradient magnitude and Gaussian

ORIENTATION NORMALIZATION

Histogram of orientation
weighted by gradient magnitude and Gaussian
